

To whom it may concern,

Our patient is contemplating facial plastic/reconstructive surgery in the near future. We require that he/she be cleared for undergoing elective general anesthesia and receive the following as part of the pre-operative evaluation:

1. A recent complete history and physical including specifically whether or not they are cleared for surgery/anesthesia
2. CBC, CMP, PT/PTT/INR, Urinalysis, pregnancy test
3. Current EKG with interpretation (if 40 years old or greater or cardiac history or risk factors)
4. Any other exam/test as you feel necessary

I would greatly appreciate your advising me of the results of your examination and other tests. Please let us know if there are any contraindications or special precautions of which we need to be made aware. Results can be faxed to our office at 504-895-0728.

Thank You,

Christian Jacob, MD/Thomas Moulthrop, MD
